Humanoid robots don't belong in homes.

They're awkward, intrusive, and don't fit.

why?

A humanoid robot roaming your home is basically an expensive, slow, unpredictable guest. It's not reliable, not private, and potentially dangerous.

70% of Americans are already not comfortable with hiring in-home (human) help, even when they can afford it.

Why would a robotic stranger be any different?

It won't.

So what belongs in a home?

Look around your home.

Furniture and appliances belong.

Things that **have a place, serve a purpose,**
and **stay out of the way** until needed.

Meet Lume

A pair of robotic lamps that can be retrofitted to any bed frame.

When needed, the lamps transform in to robotic arms.

When not in use, they function as lamps.

Robotic intelligence + furniture design + appliance function

Laundry folding in 3 steps.

1. Dump your clean laundry on the bed.
2. The bedside lamps transform into robotic arms.
3. Folding begins.
Automatically.

Lume is a new category of home robotics.

Today: it folds laundry.

Tomorrow: it turns your bed into a robotic hub with apps like massages and physical exams.

OUR PROGRESS

- Physical prototype complete w/ autonomous folding
- Launched with 3.6M views in less than 24 hrs on X.
- 425+ paid pre-orders (~1.25M revenue).

Introducing Lume, the robotic lamp.

The first robot designed to fit naturally into your home and help with chores, starting with laundry folding.

If you're looking for help and want to avoid the privacy and safety concerns of humanoids in your home, pre-order now.

0:24 The first robot designed to blend into your home...

hello@syncereai.com

<https://syncereai.github.io>

No new devices. No roaming machines in your home.
Just **intelligent furniture** that quietly helps with everyday tasks.
